

Dr. Mats Gullberg, Chief Technology Officer

Dr Gullberg is one of the co-founders of Olink, a privately held biotech supply company based in Uppsala, Sweden. He joined the company in 2005 as a senior scientist and was assigned CTO in 2007. Prior to joining Olink Dr. Gullberg worked for 10 years at Uppsala University where he also earned his Ph.D. The focus of his work since 1999 has been proximity ligation, rolling circle amplification and selector technology, all core technologies of Olink. Dr. Gullberg has been a key-player in developing the Duolink product line for detection and quantification of individual endogenous proteins, protein-protein interactions and protein modifications in fixed cells and tissues samples.

Olink is primarily offering the Duolink product line as reagent kit but for selected Pharma and Biotech partners we also offer the technology as a Partnering program enabling fast and cost efficient adaptation of the Duolink technology to suit the customers need, with a special focus on Companion Diagnostics.
